RepairWatch Report Notification

Each quarter, Georgia's Clean Air Force produces a repair facility effectiveness report called RepairWatch. To qualify for RepairWatch, a repair facility must accomplish the following:

- ✦ Complete 12 or more emission-related repairs within the designated six month reporting period
 - ✦ Maintain a first vehicle emission retest passage rate of 80 percent or better
 - ✦ Ensure vehicles being reported receive all recommended emission-related repairs.
- Stations will not be included in this report if they are suspended or revoked at the time of printing.

RepairWatch Facility Summary

Starting November 1, 2009, repair shops and inspection stations that meet state qualifications for emission-related repairs will be able to download their RepairWatch Facility Summary report* from the GCAF Web site at www.cleanairforce.com. This report is designed to assist repair shops with tracking the repair performance and success rate of their individual repair facilities.

* Qualifying repair facilities can call GCAF Station Assistance at 800.449.2471, option #2 for their login information.

RepairWatch Public Report

Within the next week, each inspection station will receive a copy of the RepairWatch Public Report. This report is designed to assist vehicle owners with identifying effective emissions repair facilities.

Please encourage motorists not to remove the report as only one copy is provided to each station. Additional copies of the RepairWatch Public Report may be printed at www.cleanairforce.com.

EPD rules require all state-certified emission inspection stations to make the RepairWatch Public Report available for public review at all times.

The RepairWatch Public Report:

- ✦ Represents inspections and repairs performed between April 1, 2009 through September 30, 2009
- ✦ Is valid through January 31, 2010.

This report is compiled based on the station phone number that the manager/owner provided on the GCAF Station Application. When performing an after-repairs test, inspectors must enter the station phone number (from the Emission Repair Form) into the analyzer. This allows GCAF to identify the station that will be included in the Public Report if qualifications are met.

Reminder: If any part of your station mailing address or owner contact information has changed since completing your station application, complete the Station Information Update Form located on the GCAF Web site.

For more information about RepairWatch, visit www.cleanairforce.com or contact GCAF Station Assistance at 800.449.2471, option #2.

If you would like to receive an e-mail copy of GAS messages or to be added to our quarterly e-newsletter, RepairWatch E-News, please send a request to info@cleanairforce.com.

~ GCAF requires that you print, read, and store all GAS messages in a binder on or near the analyzer. GCAF also recommends that you print a second copy of these messages and post them in a prominent location for your employees to read. To retrieve and print a previous GAS message, go to the GAS message retrieval function in your analyzer and select the appropriate message to print (the analyzer holds up to 500 messages). ~
