\_\_\_\_\_

- 1) Contact Becky Robinson for the GCAF logo and signage information that you will need to produce certified signage for Georgia's vehicle emission inspection program.
- 2) Create a mock-up of the sign that will be available to GCAF emission inspection stations. If producing both screen printed and vinyl signs, then a mock-up of both signs must be submitted.

- Signs must be a minimum size of 24" x 36".
  - Signs must be on .063 gauge aluminum and printed on two sides using Perpetua and Humanist fonts.
  - All signs must be printed (screen or vinyl) on white vinyl or metal using Pantone 652 for the light blue and Pantone 288 for the dark blue.
  - We recommend printing a supply of signs in advance then personalizing the operating hours and price for each individual station.
  - If producing vinyl signs, we recommend using Oracal 951 in the above referenced Pantone colors.
- 4) Contact Becky Robinson to make an appointment to have your sign(s) reviewed and/or approved. If you would like the sign back after our review, let us know and we will return it.
  - 5) All inspection stations are required to display a sign which includes the station hours, test price and type of testing. Therefore, inclusion of this information on your mock-up sign is required for approval.
  - 6) Once GCAF approves the mock-up sign, the vendor must produce the signs using the exact PMS colors specified by GCAF.
  - 7) Once certified, vendors will be added to the vendor list included in the New Station Application Packet and the GCAF Web site ([www.cleanairforce.com](http://www.cleanairforce.com)).
  - 8) The GCAF logo is copyrighted and must be produced in the appropriate Pantone colors. If it is determined a state-certified sign vendor is improperly producing emission inspection station roadside signs (including improper Pantone color and font), the vendor will **no longer** be able to produce signs for Georgia's I/M Program. The vendor name will also be removed from the GCAF Web site ([www.cleanairforce.com](http://www.cleanairforce.com)) and from the list of state-certified sign vendors included in the packet of information for new inspection stations.
  - 9) If in the future you make any changes to your production of the state-certified signs (for example a change to vinyl or paint brands), a new sample must be submitted to GCAF for review and approval. Failure to inform GCAF of sign changes can result in a vendor not being allowed to produce state-certified signs for Georgia's I/M Program.
  - 10) If an inspection station purchases an improper sign, the vendor shall be responsible for providing a sign which meets the state specifications.
  - 11) For assistance, please contact Becky Robinson at [info@cleanairforce.com](mailto:info@cleanairforce.com).
