

**Subject: Emission Analyzer Model and Serial Numbers**

**Date Sent: 2-13-12**

Please return the [GAS Unit Update Form: Analyzer Model and Serial Numbers](#) with the requested information the day of receipt of this GAS message if possible, but **before March 1, 2012**.

In an effort to provide enhanced service to the Georgia emission testing industry, GCAF is requiring that all new stations provide the model number and serial number of the GAS unit(s) being put into service. This information will enable GCAF to be more efficient and provide better service to the testing community. The serial number and model number should be listed on a decal located on the back or side of the machine.

In order to capture the model number and serial number of existing equipment, GCAF is also requiring all currently licensed stations to provide the model and serial number as well of all active GAS units assigned to their station.

This information will enhance the ability of GCAF staff to serve currently licensed facilities at the same level as new stations.

A form to accomplish this task may be found at <http://www.cleanairforce.com> under Stations, then look under Forms and Program Info. Select the form: GAS Unit Update Form: Analyzer Model and Serial Numbers. This form must be completed and faxed to the number provided on the top of the form by the station owner or manager after he/she signs and dates the document.

After the form is faxed to GCAF, it should be kept with other records in a safe place.
